

BLASTMASTER® ABRASIVE BLASTING SUITS

Blastmaster® Ultralite and Leather Abrasive Blasting Suits are designed with the strength to provide protection in the most demanding working environments. When compared to traditional clothing options, Marco's Ultralite and Leather Blast Suits are an economical and durable choice. Typical applications include blast rooms, blast yards, bridges, oil refineries, pipelines, railcar shops, shipyards, and storage tanks.

ENHANCED SAFETY

A blast suit should be worn when blasting to provide an operator with a protective barrier against harsh job site conditions. The unique design and high-quality materials used in the construction of Marco's Blast Suits are selected to provide superior resistance to abrasive rebound, ripping, and general wear. A dedicated blast suit reduces the risk of carrying abrasive and contaminants from the work site.

THE RIGHT BLAST SUIT FOR THE JOB

The Ultralite Blast Suit is a durable, light-weight coverall designed specifically for abrasive blasting environments where mineral, slag, and other non-ferrous abrasives are used. This blast suit is constructed of a durable nylon front and a breathable cotton twill back, offering operator comfort and protection against abrasive rebound. The durable zipper is protected by an overlay flap with a heavy-duty hook and loop seal, effectively keeping abrasive out. Generous sizing in the armholes and legs allows the operator greater freedom of movement and the ability to suit-up while wearing boots.

The Leather Blast Suit is designed to endure the roughest environments, and is a popular choice when working in tight spaces, cold weather, and environments where rebound is heavy. This suit is ideal for applications where aluminum oxide, carbon steel shot, or carbon steel grit is being used. This suit is designed with leather covering the areas most effected by abrasive rebound. The durable zipper is protected by an overlay flap with a heavy-duty hook and loop seal, effectively keeping abrasive out.

The knees of the Ultralite suit are reinforced with leather for increased durability, extending the life of the blast suit.

Ultralite blast suits include knit cuffs for a flexible fit and easy wear, designed for keeping abrasive and debris out of the sleeves while blasting.

Both blast suits feature a breathable cotton twill back to keep the operator comfortable. Two back pockets with holes for draining abrasive provide storage for extra blast helmet lenses and tools.

The large-tooth zipper of the Ultralite and snap-closure of the Leather suits are protected from abrasive by an Overlay panel with heavy-duty hook and loop fastener.

BLASTMASTER® ABRASIVE BLASTING SUITS

KEY FEATURES:

- Superior abrasive resistance
- Cuffs and ankles designed to keep abrasive out
- Back storage pockets
- Heavy-duty zipper with protective cover (*Ultralite suit only*)
- Industrial snaps with protective cover (*Leather suit only*)
- Large range of sizes

OPTIONAL ACCESSORIES

Gloves

Choose from an extensive range of hand protection including blasting gloves, nitrile gloves, and canvas gloves.

Blasting Hood

Blastmaster® Abrasive Blasting Hose is available in standard lengths of 50, 100 and 400 feet, and custom lengths up to 200 feet.

Blast Nozzles

A wide variety of blast nozzles are available to meet even the most challenging work site requirements.

Protective Clothing

Marco offers a variety of light weight coverall options, including DuPont® Tyvek®, to protect workers from water and overspray.
