OPERATOR’S MANUAL

BLASTMASTER® MOBILE BLASTING SYSTEMS

Before using this equipment, read, understand and follow all instructions in the Operator’s Manuals provided with this equipment. If the user and/or assistants cannot read or understand the warnings and instructions, the employer of the user and/or assistants must provide adequate and necessary training to ensure proper operation and compliance with all safety procedures pertaining to this equipment. If Operator’s Manuals have been lost, please visit www.marco.us, or contact Marco at 563.324.2519 for replacements. Failure to comply with the above warning could result in death or serious injury.

WARNING
Company Profile

Since 1944, Marco has developed a strong tradition of providing innovative and reliable products and services to the surface preparation and protective coatings industries. We are the world’s premier provider of Abrasives, Blasting, Coating, Dust Collectors, Engineered Systems, Rental, Safety, Service, Repair, & Modernization, and Vacuums.

Through innovative designs and a total commitment to quality, Marco manufactures products that increase production rates, create a safer workplace, and reduce maintenance costs. Marco’s industry experience, manufacturing capabilities, legendary customer service, product availability, logistics services, and technology leadership is your assurance that we deliver high quality products and services, providing the best value to you, our customer.

The Marco Difference

• **Industry Experience** – With Marco on your team, you have access to expertise which can only come from decades of industry leadership. We have organized our engineering department, production specialists, customer operations, and safety support into a “Center of Competence.” As a Marco customer, you have access to hundreds of years of cumulative experience related to your operations.

• **Manufacturing Excellence** – Marco is a U.S. based, ISO 9001:2008 certified manufacturer of equipment for the Surface Preparation and Protective Coatings industries. Marco’s engineers benchmark the industry to ensure that we design and manufacture superior products that set the “Gold Standard” for performance, safety, and quality.

• **Legendary Customer Service** – Marco’s legendary customer service team is staffed by friendly, highly-trained individuals who are focused on providing the highest level of product support, order accuracy, and customer satisfaction.

• **Product Availability** – We stock over 10,000 SKU’s and have more than 45 shipping locations to serve North American and International markets for all major brands of blasting and coating equipment. As the largest provider of surface preparation and protective coatings equipment in the world, our inventory levels and product availability are unmatched.

• **Logistics Services** – Marco’s in-house logistics team is dedicated to moving your shipment anywhere in the world. We move more than 14,000 truckloads every year, allowing you to save on freight costs by leveraging our buying power. Lower your process costs with a single invoice, which includes product and freight.

• **Technology Leadership** – Our website provides: Operator’s Manuals, Part Numbers and Schematics Guides, SDS information, and Features & Specifications Guides, providing access to information 24/7. Our Extranet application allows you to receive quotes and place orders online. Our Intranet maintains a complete record of your purchase history to assist with ongoing support of your existing equipment and future purchasing decisions.

Vision Statement

Marco is the world’s premier provider of Abrasives, Blasting, Coating, Dust Collectors, Engineered Systems, Rental, Safety, Service, Repair, & Modernization, and Vacuums.

Mission Statement

Marco provides strong leadership and innovation to the surface preparation and protective coatings industries. We dedicate our efforts to the continuous improvement of our products, services, processes, people, and most importantly, the quality of our customer’s experience.

Quality Statement

Marco is committed to providing superior quality in the design, manufacturing, distribution, rental, service, and repair of our products. Our ISO 9001:2008 certification extends throughout all operations in all locations. Continuous improvement of our processes and supply chain Integration comprise the core of our business strategy for delivering exceptional quality and value in all Marco products and services.

Management Philosophy

We are a company dedicated to the success of every customer and associate. We discuss, debate, challenge, measure, and test our ideas. We will be boundless and limitless in our passion to improve. Through sound leadership and dedicated associates, we will ensure a long term, profitable future for Marco, our associates, customers, and suppliers.

DEFINITION OF TERMS

⚠️ DANGER
This is an example of danger. This indicates an 
imminently hazardous situation which, if not avoided, will 
result in death or serious injury.

⚠️ CAUTION
This is an example of a caution. This indicates a 
potentially hazardous situation which, if not avoided, 
may result in minor or moderate injury. It can also be 
used to alert against unsafe practices.

⚠️ WARNING
This is an example of a warning. This indicates a 
potentially hazardous situation which, if not avoided, 
could result in death or serious injury.

NOTICE
This is an example of a notice. This indicates policy 
or practice directly related to safety of personnel or 
protection of property.
Failure to comply with ANY WARNING listed below could result in death or serious injury.

- OSHA sets exposure limits to protect workers from exposure to respirable crystalline silica, 29 CFR 1910.1053. Airborne dust could increase the exposure levels beyond permissible limits. Breathing dust containing silica could cause silicosis, a fatal lung disease. Breathing dust during abrasive blasting operations, post-blast cleaning operations, and/or servicing equipment within the abrasive blasting area may expose an individual to conditions that could cause asbestosis, lead poisoning and/or other serious or fatal diseases. Harmful dust containing toxic material from abrasives or surfaces being abrasive blasted can remain suspended in the air for long periods of time after abrasive blasting has ceased. A NIOSH-approved, well-maintained, respirator designed for the specific operation being performed must be used by anyone abrasive blasting, handling or using the abrasive, and anyone in the area of the dust.

- Contact NIOSH and OSHA offices to determine the proper respirator for your specific application. The air supplied to the respirator must be at least Grade D quality as described in Compressed Gas Association Commodity Specification G-7.1 and as specified by OSHA Regulation 1910.134. Ensure air filter and respirator system hoses are not connected to non-air sources or in-plant lines that may contain nitrogen, oxygen, acetylene or other non-breathable gases. Before removing respirator, use an air monitoring instrument to determine if the atmosphere is safe to breathe.

- You must comply with all OSHA, local, City, State, Province, Country and jurisdiction regulations, ordinances and standards, related to your particular work area and environment. Keep unprotected individuals out of the work area.

- Abrasive blasting operators must receive thorough training on the use of abrasive resistant attire which includes: supplied-air respirator, abrasive blasting suit, safety shoes, gloves, ear protection and eye protection. Protect the operator and bystanders by complying with NIOSH and OSHA Safety Standards.

- Inspect all equipment for wear or damage before and after each use. Failure to use Original Equipment Manufacturer repair parts and failure to immediately replace worn or damaged components could void warranties and cause malfunctions.

- OSHA requires abrasive blasting nozzles be equipped with an operating valve, which shall be designed to be held open only by continuous hand pressure and shall close immediately upon release of hand pressure (i.e., a “deadman” control). The valve shall not be modified in any manner that would allow it to remain open without the application of continuous hand pressure by the operator. Failure to comply with the above warning could result in release of high speed abrasive and compressed air resulting in death or serious injury. OSHA 29CFR 1910.244(b)

- Point the abrasive blasting nozzle only at the surface being abrasive blasted. Never point the abrasive blasting nozzle or abrasive stream at yourself or others.

- Unless otherwise specified, maximum working pressure of abrasive blasting pots and related components must not exceed 150 psi. Exceeding maximum working pressure of 150 psi could cause the abrasive blasting pot and components to burst. Failure to comply with the above warning could result in death or serious injury.

- Never weld, grind or drill on the abrasive blasting pot (or any pressure vessel). Doing so will void ASME certification and manufacturer’s warranty. Welding, grinding or drilling on the abrasive blasting pot (or any pressure vessel) could weaken the vessel causing it to burst. Failure to comply with the above warning could result in death or serious injury. (ASME Pressure Vessel Code, Section VIII, Division 1)

- This equipment is not intended for use in any area that might be considered a hazardous location, as described in the National Electric Code NFPA 70, Article 500. Use of this equipment in a hazardous location could cause an explosion or electrocution.

- Never attempt to move an abrasive blasting pot containing abrasive. Never attempt to manually move abrasive blasting pots greater than 6.5 cubic foot capacity. Always use at least two capable people to manually move an abrasive blasting pot on flat, smooth surfaces. A mechanical lifting device must be used if an abrasive blasting pot is moved in any other manner.
HAZARD IDENTIFICATIONS

**WARNING**

Failure to comply with ANY WARNING listed below could result in death or serious injury.

- This product is not for use in wet environments. Always use a Ground Fault Interrupter Circuit (GFIC) for all electrical power source connections. Use of this product in wet environments could create a shock or electrocution hazard.

- Frozen moisture could cause restrictions and obstructions in pneumatic control lines. Any restriction or obstruction in the pneumatic control lines could prevent the proper activation and deactivation of the remote control system, resulting in the release of high speed abrasive and compressed air. In conditions where moisture may freeze in the control lines an antifreeze injection system approved for this application can be installed.

- Do not cut, obstruct, restrict or pinch pneumatic control lines. Doing so could prevent the proper activation and deactivation of the remote control system, resulting in the release of high speed abrasive and compressed air.

- Use of Marco remote control switches with other manufacturer’s remote control systems could cause unintended activation of remote control systems resulting in the release of high speed abrasive and compressed air. Only Marco remote control switches should be used with Marco remote control systems.

- Always be certain to have secure footing when abrasive blasting. There is a recoil hazard when abrasive blasting starts that may cause user to fall and misdirect the abrasive stream at operator or bystander.

- Never use an abrasive blasting pot or attachments as a climbing device. The person could slip and fall. The abrasive blasting pot could become unstable and tip over.

- For equipment manufactured by entities other than Marco, you must consult the Original Equipment Manufacturer operator’s manuals, information, training, instructions and warnings, for the proper and intended use of all equipment.

- Flammable fumes, such as solvent and paint fumes in the work area can present an ignition or explosion hazard if allowed to collect in adequate concentrations. To reduce conditions that could result in a fire or an explosion, provide adequate ventilation, eliminate all ignition or spark sources, keep the work area free of debris, store solvents and solvent contaminated rags in approved containers, follow proper grounding procedures, do not plug/unplug power cord or turn on/off power switches when flammable fumes are present, keep a working fire extinguisher or provide another fire suppression system in the work area. Cease all operations and correct condition if a spark or ignition source is identified during operation.

- Always depressurize the entire system, disconnect all power sources and lockout/tagout all components before any maintenance or troubleshooting is attempted. Failure to comply with the above warning could cause electrical shock and inadvertent activation of equipment resulting in death or serious injury.

- Moving parts can present an area where crushing, pinching, entanglement or amputation may occur. Do not place body parts or foreign objects in any area where there are moving parts.

- Surfaces of heated supply tanks, drums and/or lines as well as the adjoining plumbing may become hot during normal use. Do not touch these heated surfaces without proper protection. Deactivate and allow sufficient time for all surfaces to cool before attempting any maintenance.

- High-pressure fluid from gun, hose leaks, or ruptured components can pierce skin and can cause a serious injury that may result in amputation. Do not point gun or spray tip at anyone or at any part of the body. Keep clear of any leaks or ruptures. Depressurize the entire system before attempting cleaning, inspecting, or servicing equipment.

- Exposure to toxic fluids or fumes may occur during the normal operation of this system. Before attempting to fill, use, or service this system, read SDS’s to know the specific hazards of the fluids you are using. Always use proper Personal Protective Equipment when attempting to fill, use, or service this system.

- The use of this product for any purpose other than originally intended or altered from its original design is prohibited.

- Never hang objects from the abrasive blasting pot handle. Doing so may cause the abrasive blasting pot to become unstable and tip over.
HAZARD IDENTIFICATIONS

⚠️ CAUTION ⚠️

Failure to comply with ANY CAUTION listed below may result in minor or moderate injury.

- Static electricity can be generated by abrasive moving through the abrasive blasting hose causing a shock hazard. Prior to use, ground the abrasive blasting pot and abrasive blasting nozzle to dissipate static electricity.
- High decibel noise levels are generated during the abrasive blasting process which may cause loss of hearing. Ensure appropriate Personal Protective Equipment and hearing protection is in use.

⚠️ NOTICE ⚠️

Failure to comply with ANY NOTICE listed below could pose a hazard to personnel or property.

- See Air & Abrasive Consumption Chart for estimated abrasive consumption rates and required air flow (cubic feet per minute). Your system must meet these minimum requirements to ensure proper function and performance.
- Always use abrasive that is dry and properly screened. This will reduce the potential for obstructions to enter the remote control system, abrasive metering valve and abrasive blasting nozzle.
- Moisture build-up occurs when air is compressed. Any moisture within the abrasive blasting system will cause abrasive to clump, clogging metering valves, hoses and nozzles. Install an appropriately sized moisture separator at the inlet of the abrasive blasting system. Leave the moisture separator petcock slightly open to allow for constant release of water. If insufficient volume of air exists and petcock is unable to be left open (at all times) petcock should be opened frequently to release water.
- To reduce abrasive intrusion in the air supply hose, depressurize the abrasive blasting pot before shutting off air supply from compressor.
- Inspect abrasive blasting nozzle before placing into service. Damage to abrasive blasting nozzle liner or jacket may occur during shipping. If you receive a damaged abrasive blasting nozzle, contact your distributor immediately for replacement. Abrasive blasting nozzles placed into service may not be returned. Abrasive blasting nozzle liners are made of fragile materials and can be damaged by rough handling and striking against hard surfaces. Never use a damaged abrasive blasting nozzle.
- Abrasive blasting at optimal pressure for the abrasive used is critical to productivity. Example: For an abrasive with an optimal abrasive blasting pressure of 100 psi at the abrasive blasting nozzle, one pound per square inch of pressure loss will reduce abrasive blasting efficiency by 1.5%. A 10 psi reduction in air pressure will cause a 15% loss of efficiency. Use a Needle Pressure Gauge to identify pressure drops in your system. Consult with your abrasive supplier for the requirements of your abrasive.
- Replace abrasive blasting nozzle if liner or jacket is cracked or damaged. Replace abrasive blasting nozzle if original orifice size has worn 1/16” or more. Determine abrasive blasting nozzle wear by inserting a drill bit 1/16” larger than original size of abrasive blasting nozzle orifice. If the drill bit passes through abrasive blasting nozzle, replacement is needed.
Failure to comply with ANY NOTICE listed below could pose a hazard to personnel or property.

- See Air & Abrasive Consumption Chart for estimated abrasive consumption rates and required air flow (cubic feet per minute). Your system must meet these minimum requirements to ensure proper function and performance.
- When it comes to air & abrasive mixtures, more is not necessarily better. Optimum abrasive blasting efficiency takes place when a lean air & abrasive mixture is used. To correctly set the abrasive metering valve, begin with the valve fully closed and slowly increase the amount of abrasive entering the airstream. As you increase the abrasive flow, watch for a “blue flame” at the exit of the abrasive blasting nozzle. Faster cutting, reduced abrasive consumption and lower clean up costs, are benefits of the “blue flame”.
- Abrasive blasting at optimal pressure for the abrasive used is critical to productivity. Example: For an abrasive with an optimal abrasive blasting pressure of 100 psi at the abrasive blasting nozzle, one pound per square inch of pressure loss will reduce abrasive blasting efficiency by 1.5%. A 10 psi reduction in air pressure will cause a 15% loss of efficiency. Use a Needle Pressure Gauge to identify pressure drops in your system. Consult with your abrasive supplier for the requirements of your abrasive.

*Optional or alternative device. Ask your Marco Representative for more details.

**Abrasive** – Select the correct Abrasive (1) for the application. Review the SDS (Safety Data Sheet) to ensure the correct PPE (Personal Protective Equipment) and Environmental Controls have been selected and are in place.

**Air Compressor** – Select an Air Compressor (2) of adequate size to support all equipment requirements. Refer to “Air & Abrasive Consumption Chart” for Abrasive Blasting Nozzle (13) air consumption requirements. Before connecting Air Hose (4), sample the air being produced by the air compressor (2) to ensure it is free of petroleum contaminants.

**Air Hose, and Air Hose Couplings & Gaskets** – Select Air Hoses (4) of sufficient size to support all subsequent volumetric requirements and with a sufficient PSI (pound per square inch) rating. Inspect all Air Hoses (4), and Air Hose Couplings & Gaskets (3) for damage or wear. Repair or replace damaged or worn components.

**Abrasive Blasting Hose, Abrasive Blasting Hose Couplings & Gaskets, and Abrasive Blasting Nozzle Holder** – Select an Abrasive Blasting Hose (19) that has an inner diameter 3 to 4 times larger than your Abrasive Blasting Nozzle (13). Inspect Abrasive Blasting Hose (19), Abrasive Blasting Hose Couplings & Gaskets (20), and Abrasive Blasting Nozzle Holder (15) for damage or wear. Repair or replace damaged or worn components.

**Safety Cables** – Install a Safety Cable (5) at each Abrasive Blasting Hose (19), and Air Hose (4) connection points.

**Aftercooler and Moisture Separator** – Ensure Aftercooler (28) is positioned on stable ground. Keep petcock drain of Moisture Separator (23) slightly open during use. Drain both devices after each use.

**Supplied-Air Respirator, Breathing Line, Breathing Air Filter, Climate Control Device, CO Monitor, Ambient Air Pump** – You MUST consult the Operator’s Manual supplied with your Respiratory Equipment (6, 7, 8, 9, 10, 17) for ALL applicable instructions and warnings. Inspect all Respiratory Equipment components for damage or wear. Repair or replace damaged or worn components.

**Abrasive Blasting Suit and Gloves** – Select an abrasive-resistant Abrasive Blasting Suit (11) that is slightly oversized to allow ease of movement and allows air to flow around your body. Select abrasive-resistant Gloves (12) with a tight fit and a long cuff that overlaps the sleeve of the Abrasive Blasting Suit (11).

**Abrasive Metering Valve and Abrasive Blasting Pot** – Confirm Abrasive Blasting Pot (25) is positioned on stable ground. Inspect Abrasive Blasting Pot (25) and Abrasive Metering Valve (21) for damage or wear. Repair or replace damaged or worn components.

**Abrasive Blasting Pot Screen and Abrasive Blasting Pot Lid** – Always use an Abrasive Blasting Pot Screen (26) when filling Abrasive Blasting Pot (25) with Abrasive (1) to prevent debris from entering the Abrasive Blasting Pot (25). Remove Abrasive Blasting Pot Lid (27) before operating the Abrasive Blasting Pot (25). Install Abrasive Blasting Pot Lid (27) after use to protect the Abrasive Blasting Pot’s (25) interior.

**Remote Control System, Remote Control Switch, Control Line,** – Inspect Remote Control System (22) and Control Line (18) for damage or wear. Repair or replace damaged or worn components. Ensure Control Line (18) fittings connected to the Remote Control System (22) are tight and free of leaks. Ensure Remote Control Switch (16) is functioning properly. Consult Remote Control Switch Operator’s Manual for applicable instructions.

**Lighting System** – Ensure the Lighting System (14) is connected to a proper power supply before use.
Description
An blast pot is a pressure vessel used to contain a supply of abrasive material during the blast process. Used as part of a mobile blasting system, the blast pot delivers a mixture of abrasive and compressed air to the blast nozzle for surface preparation. By packaging a high performance blast system on a trailer or skid, Marco has created high production blast systems with unmatched portability and versatility. These systems combine an blast pot, moisture management system, and a 6-Outlet airline filter together on a skid or trailer for ease of portability. Typical applications include blast rooms, blast yards, oil refineries, and pipelines. Common abrasives used include garnet, mineral abrasives, and slags.

Operational Requirements
• Proper air supply to provide a minimum of 50 psi to a maximum of 150 psi working pressure.

The following may cause safety hazards or reduced performance:
• Improper installation and/or maintenance of components.
• Failure to place Blastmaster® Mobile Blasting System on a secure, flat surface.
• Improper air supply pressure. See operator’s manuals for proper psi ratings.
• Incorrect lifting/transporting of Blastmaster® Mobile Blasting System or incorrect or worn lifting devices.

Initial Setup
• Place Blastmaster® Mobile Blasting Systems on a secure level surface that can withstand the weight with a full Blast Pot. Be aware of possible erosion of surface and load shifting.
• Connect air supply hose from compressor to Inlet (5) of Aftercooler (14). To provide best performance, an air supply hose with an inner diameter five to six times the size of blast nozzle orifice is recommended.
• Connect blast hose to Coupling (10) installed on Abrasive Metering Valve (9).

Operating Instructions
Operating Instructions are limited to the instructions found in the Original Equipment Manufacturer’s Operator’s Manuals. Please refer to all literature included with your Blastmaster® Mobile Blasting Systems at time of delivery. If this literature is unavailable, please contact Marco for a replacement set before use.

Before use - BLAST POT:
Note: Do not operate this equipment without a pressure relief device in place. It is the end users responsibility to provide.
• Inspect entire system for air leaks or damage. Repair or replace damaged components.
• Ensure sufficient compressed air supply volume and/or pressure.
• Inspect Pop-Up Valve Seat (2) and Pop-Up Valve (3) for damage. Replace damaged components before use.
• Inspect Muffler Assembly (4) for wear and abrasive. Repair or replace as needed.
• Inspect remote control system components as instructed in the device’s Operator’s Manual.
• Inspect Pusher Line (8) for damage. Replace damaged components before use.
• Inspect Blast Pot (1) for damage. Do not use Blast Pot if damaged.
**OPERATING INSTRUCTIONS**

**Before use - AFTERCOOLER:**

- Using a screwdriver or similar device, gently rotate Fan Blades to confirm free movement. If the Fan Blades do not move freely, remove obstruction or replace Fan Blade and Motor Assembly before use. See Aftercooler Operators Manual.
- Open Drain Valves (15,16) to release any liquid. Close Drain Valves once liquid stops flowing.
- Fill Air Motor Lubricator (17) with SAE 10 oil or air tool anti-freeze lubricant.
- Close Ball Valves (7,11).
- Turn on compressor air supply.
- Slowly open Inlet Ball Valve (7), looking and listening for leaks.
- If leaks are found, turn off air supply, open Drain Valve (15), allow air pressure to completely release. Repair leaks as needed.
- Slightly open Drain Valve (15) to release collected moisture.
- Slowly open Air Supply Ball Valve (18) to Air Motor (19).
- Adjust Air Motor Pressure Regulator (20) to 60 psi for proper Cooling Fan speed. Do not exceed 60 psi.
- Watch the lubricant flow through the combination Control Knob/ Sight Dome (21) on top of the Air Motor Lubricator, adjust the flow to one drop per minute. NOTE: Failure to maintain lubrication will cause the motor to fail.

**WARNING**

Always depressurize the entire system, disconnect all power sources and lockout/tagout all components before any maintenance or troubleshooting is attempted. Failure to comply with the above warning could cause electrical shock and inadvertent activation of equipment resulting in death or serious injury.

This product is not for use in wet environments. Always use a Ground Fault Interrupter Circuit (GFIC) for all electrical power source connections. Use of this product in wet environments could create a shock or electrocution hazard. Failure to comply with the above warning could result in death or serious injury.

You must comply with all OSHA, local, City, State, Province, Country and jurisdiction regulations, ordinances and standards, related to your particular work area and environment. Keep unprotected individuals out of the work area. Failure to comply with the above warning could result in death or serious injury.
OPERATING INSTRUCTIONS

**WARNING**
The 286 Series Airline Filters do not remove carbon monoxide or any other toxic gases. Review, understand and follow all federal and state safety regulations regarding the use of supplied-air respirators. Failure to avoid the above danger will result in death or serious injury. OSHA REGULATION 1910.134

**Before use - 286 AIRLINE FILTER:**
- Inspect components for damage. Replace damaged components before use.
- Ensure Nuts (4) are tight. Tighten Nuts using an alternating pattern.
- If equipped with a pressure regulator, ensure Pressure Regulator (2) is turned to closed position.
- Ensure Airline Fittings (1) installed on Airline Filter are compatible with the device to be attached. See Operator’s Manual for connected device for recommended airline fittings.
- Slowly turn on air supply and check for air leaks. Repair leaks as needed.
- Check Pressure Relief Valve (3) (if equipped) for proper operation. Replace as needed.

**During use - 286 AIRLINE FILTER:**
- Set appropriate air pressure for connected devices by rotating the knob of Pressure Regulator (2). (See Operator’s Manual of connected device(s) for recommended air supply pressure level.)
- Periodically open Petcock (5) to allow condensate to drain. For continuous draining of condensate, operate with Petcock in a slightly open position.
- Monitor air supply pressure to connected device(s) using Pressure Gauge (5). Adjust air flow pressure of compressed air as needed.
- If an operator sees, tastes, smells, or feels contaminants inside a supplied-air respirator connected to the Barricade® 286 Airline Filter, stop use of the Barricade® 286 Airline Filter. Remove and dispose of Filter Cartridge, clean interior of Filter Housing using a mild detergent soap, and install a new Filter Cartridge. Ensure compressed air supply connected to Barricade® 286 Airline Filter is at least Grade D quality as described in Compressed Gas Association Commodity Specification G-7.1 and as specified by OSHA Regulation 1910.134.

**WARNING**
Do not connect 286 Airline Filter and respirator system to an air source containing carbon monoxide or other toxic gases. Ensure air source is Grade D or higher quality. Failure to comply with the above warning could result in death or serious injury.

---

Blastmaster® Mobile Blasting Systems
OPERATING INSTRUCTIONS

**During use - MOBILE BLASTING SYSTEMS:**

- Ensure Blast Pot is not pressurized. Fill Blast Pot (1) through hole in top of Blast Pot. Do not overfill.
- Close Ball Valves (2,8).
- Open Ball Valves (5,6) on Aftercooler.
- Open Ball Valve (2) to pressurize Blast Pot (1).
- Open Ball Valve (8).
- To start/stop abrasive blasting, refer to remote control system Operator’s Manual.
- Monitor remote control system components per Operator’s Manual.
- Check volume of lubricant in Air Motor Lubricator (9) every 60 minutes. Add lubricant as needed.
- Observe Drain Valve (15) for release of liquids. If no liquid is being released, adjust as needed.

**After use:**

- Empty abrasive from Blast Pot when blasting is concluded for the day. To remove abrasive, place Metering Valve (3) in FULL OPEN position. Close Ball Valve (8). Remove Blast Nozzle from nozzle holder on blast hose.
  
  **Note:** Place blast hose in a container suitable for catching abrasive. Be prepared for strong recoil, the blast hose will provide strong recoil as abrasive exits blast hose.

- Activate remote control system per Operator’s Manual. When Blast Pot is empty, only air will exit blast hose. Deactivate remote control system. Place Metering Valve (3) in CLOSED position.
- Turn off air supply.
- Close Ball Valve (2) on Blast Pot.
- Inspect Blast Pot components for damage. Replace damaged components before use.
- Cover Blast Pot when not in use to reduce debris and water intrusion.
- Close Air Supply Inlet Ball Valve (10) to Air Motor (11).
- Slowly open Drain Valve (13) to release collected liquid and stored compressed air. Once all pressure is released, close Inlet Ball Valve (4) disconnect compressed air supply from Air Inlet (7).
- Close Drain Valves (12,13).
- Slowly move lever of Petcock (14) to the fully open position to drain residual condensate.
- Close Petcock (14) after air and condensate have emptied from Airline Filter.
- Clean Blastmaster® Mobile Blasting System.

---

**DANGER**

Do not operate this equipment without the proper pressure relief device in place. Exceeding maximum working pressure could cause vessel or components to burst. Failure to comply with the above warning will result in death or serious injury. ASME STANDARD PTC25-2014. OSHA Standard 1910.169 (B)(3)(l).

**WARNING**

Read, understand, and follow the Original Equipment Manufacturer operator’s manuals, information, training, instructions, and warnings, for the proper and intended use of all equipment. Failure to comply with the above warning could result in death or serious injury.

**WARNING**

Inspect all equipment for wear or damage before and after each use. Failure to use Original Equipment Manufacturer repair parts and failure to immediately replace worn or damaged components could void warranties and cause malfunctions. Failure to comply with the above warning could result in death or serious injury.

**WARNING**

The use of this product for any purpose other than originally intended or altered from its original design is prohibited. Failure to comply with the above warning could result in death or serious injury.
**WARNING**

Always depressurize the entire system, disconnect all power sources and lockout/tagout all components before any maintenance or troubleshooting is attempted. Failure to comply with the above warning could cause electrical shock and inadvertent activation of equipment resulting in death or serious injury.

**WARNING**

Never weld, grind or drill on the abrasive blasting pot (or any pressure vessel). Doing so will void ASME certification and manufacturer’s warranty. Welding, grinding or drilling on the abrasive blasting pot (or any pressure vessel) could weaken the vessel causing it to burst. Failure to comply with the above warning could result in death or serious injury. (ASME Pressure Vessel Code, Section VIII, Division 1)

**CAUTION**

High decibel noise levels are generated during the abrasive blasting process which may cause loss of hearing. Ensure appropriate Personal Protective Equipment and hearing protection is in use. Failure to comply with the above caution may result in minor or moderate injury.
OPERATING INSTRUCTIONS

Installation of Bulk Bag Rack on 20.0 Cu. Ft. Abrasive Blasting Systems

**Installation:**
1) Depressurize blast pot per blast pot Operator’s Manual.
2) Ensure Locking Pins are not inserted in Bulk Bag Rack Collar Pin Holes (5).
3) Attach lifting device to Bulk Bag Rack Lifting Eyes (1), or use Fork Pockets, if equipped.
4) Raise and position Rack Legs (3) in Bulk Bag Rack Collars (4).
5) Insert Locking Pin (6) through Pin Holes (5) in Bulk Bag Rack Collar (4) and Rack Legs (3). Repeat on remaining three Bulk Bag Rack Collars.
6) If equipped, open gate assembly by pulling down on chain assembly rope (2), and swing gate open.
7) Utilizing appropriate lifting device, place Abrasive Bulk Bag (8) in Blastmaster® Bulk Bag Rack (7).
8) If equipped, swing gate assembly back into place and verify that it has latched into position.

**After use:**
1) Remove Locking Pins (6) from Bulk Bag Rack Collar Pin Holes (5).
2) Attach lifting device to Bulk Bag Rack Lifting Eyes (1), or use Fork Pockets, if equipped.
3) Raise Bulk Bag Rack out of Bulk Bag Rack Collars (4) and lower to the ground.
4) Inspect Bulk Bag Rack for damage or wear.

**WARNING**
Always depressurize the entire system, disconnect all power sources and lockout tagout all components before any maintenance or troubleshooting is attempted. Failure to comply with the above warning could cause electrical shock and inadvertent activation of equipment resulting in death or serious injury.

**WARNING**
Transporting, lifting, or moving this device must be in accordance with applicable OSHA standards and ASME B30 standards, as well as any applicable local, state, or federal requirements. Failure to comply with the above warning could result in death or serious injury.

**WARNING**
Keep clear of Bulk Bag Rack Collars when lowering or raising Bulk Bag Rack into operating position. Do not attempt to guide the Bulk Bag Rack into position with the use of hands or feet. Failure to comply with the above warning could result in death or serious injury.

**WARNING**
Inspect all equipment for wear or damage before and after each use. Failure to use Original Equipment Manufacturer repair parts and failure to immediately replace worn or damaged components could void warranties and cause malfunctions. Failure to comply with the above warning could result in death or serious injury.
WARNING

Always remove any locking device securing the bulk bag rack before attempting removal. Do not use the installed bulk bag rack as a lifting device for the blast pot. Lifting a blast pot using the bulk bag rack can cause the blast pot to become unstable and damage components. Failure to comply with the above warning could result in death or serious injury.

WARNING

Do not transport abrasive blasting pot with bulk bag rack installed. Transporting abrasive blasting pot with bulk bag rack installed could cause the abrasive blasting pot to become unstable or allow the bulk bag rack to become disengaged from the abrasive blasting pot. Failure to comply with the above warning could result in death or serious injury.

OPERATING INSTRUCTIONS

Installation of Bulk Bag Rack on 20.0 Cu. Ft. Abrasive Blasting Systems

(Cont.)
Hoses and Connections

Blast hoses and air hoses are a high wear component of the abrasive blast system. Sharp bends in the blast hose create high wear points resulting in soft spots that can fail while blasting. Check the full length of the blast hose assembly for soft spots caused by wear. To protect against serious injury to personnel replace blast hoses with soft spots.

Most air hose, blast hose, and threaded couplings have pin holes that align when connected. To protect against unintentional hose disconnections, four Safety Pins (1) must be installed through these holes. As a secondary safety measure each hose connection should also include a Hose Whip Check (2) that will hold the hose if there is an unintentional disconnection. Connect one loop to each side of connection and stretch out as shown below.

Always depressurize the entire system, disconnect all power sources and lockout/tagout all components before any maintenance or troubleshooting is attempted. Failure to comply with the above warning could cause electrical shock and inadvertent activation of equipment resulting in death or serious injury.

Worn blast hose assemblies can fail while blasting. Check the full length of blast hose assembly for soft spots caused by wear. Replace blast hoses that show signs of excessive wear. Failure to comply with the above caution may result in minor or moderate injury.

Leaks around couplings and nozzle holders indicate worn or loose fitting parts. They could disconnect while under pressure. Inspect all couplings and nozzles daily for worn or loose fitting parts. Inspect nozzle threads for wear. Failure to comply with the above caution may result in minor or moderate injury.

Most air hose, blast hose, and threaded couplings have gaskets that seal the connection. To reduce loss of air pressure and/or premature abrasive wear replace these gaskets when leaks are found. Replace gaskets when visible wear or leaks are found.

Leaks around couplings and nozzle holders could indicate worn or loose fitting parts. They could disconnect while under pressure. Inspect all couplings and nozzles daily for worn or loose fitting parts. Check nozzle threads for wear.
SPECIFICATIONS

3.5 Cu. Ft. Skid-Mounted Abrasive Blasting Systems

» Height: 4 Feet, 10 Inches
» Length: 6 Feet
» Width: 4 Feet
» Total System Dry Weight: 1,100 lbs.

3.5 Cu. Ft. Trailer-Mounted Abrasive Blasting Systems

» Overall Trailer Length: 11 Feet, 7 Inches
» Overall Trailer Width: 6 Feet, 6 Inches
» Deck Length: 8 Feet
» Deck Width: 5 Feet
» Height: 6 Feet, 5 Inches
» Overall System Dry Weight: 2,100 lbs.

3.5 Cu. Ft. M-Series 16' Trailer-Mounted Abrasive Blasting Systems

» Overall Trailer Length: 22 Feet, 5 Inches
» Overall Trailer Width: 8 Feet, 5 Inches
» Deck Length: 18 Feet
» Deck Width: 6 Feet, 5 Inches
» Height: 6 Feet
» Overall System Dry Weight: 3,500 lbs.
SPECIFICATIONS

6.5 Cu. Ft. Skid-Mounted Abrasive Blasting Systems

» Height: 4 Feet, 10 Inches
» Length: 6 Feet
» Width: 4 Feet
» Overall System Dry Weight: 1,200 lbs.

6.5 Cu. Ft. Trailer-Mounted Abrasive Blasting Systems

» Overall Trailer Length: 11 Feet, 7 Inches
» Overall Trailer Width: 6 Feet, 6 Inches
» Deck Length: 8 Feet
» Deck Width: 5 Feet
» Height: 6 Feet, 5 Inches
» Overall System Dry Weight: 2,200 lbs.
SPECIFICATIONS

20.0 Cu. Ft. Skid-Mounted Abrasive Blasting Systems

- Height: 7 Feet, 6 Inches
- Length: 9 Feet, 2 Inches
- Width: 6 Feet, 6 Inches
- Overall System Dry Weight: 4,500 lbs.

20.0 Cu. Ft. Trailer-Mounted Abrasive Blasting Systems

- Overall Trailer Length: 28 Feet, 2 Inches
- Overall Trailer Width: 6 Feet, 9 Inches
- Deck Length: 18 Feet
- Deck Width: 6 Feet 5 Inches
- Height: 9 Feet, 3 Inches
- Overall System Dry Weight: 6,500 lbs.
MAINTENANCE

Remove & Install Blast Pot

Maintenance Instructions are limited to the instructions found in the Original Equipment Manufacturer’s Operator’s Manuals. Please refer to all literature included with your Blastmaster® Mobile Blasting Systems at time of delivery. If this literature is unavailable, please contact Marco for a replacement set before use.

1) Depressurize entire system.
2) Disconnect Hose (1).

Note: Approximate empty weight of blast pot varies from 320 — 875 pounds. Use suitable lifting devices to support or maneuver blast pot.

3) Remove Hardware (2) and remove Blast Pot.
4) Install parts in reverse order.
MAINTENANCE

Remove & Install Aftercooler

Maintenance Instructions are limited to the instructions found in the Original Equipment Manufacturer’s Operator’s Manuals. Please refer to all literature included with your Blastmaster® Mobile Blasting Systems at time of delivery. If this literature is unavailable, please contact Marco for a replacement set before use.

1) Depressurize entire system.
2) Disconnect Hoses (1,3).

Note: Approximate empty weight of aftercooler varies from 200 — 1200 pounds. Use suitable lifting devices to support or maneuver aftercooler.

3) Remove Hardware (2) and remove aftercooler.
4) Install parts in reverse order.
MAINTENANCE

Remove & Install 286 Airline Filter

Maintenance Instructions are limited to the instructions found in the Original Equipment Manufacturer’s Operator’s Manuals. Please refer to all literature included with your Blastmaster® Mobile Blasting Systems at time of delivery. If this literature is unavailable, please contact Marco for a replacement set before use.

1) Depressurize entire system.
2) Disconnect Hose (1).
3) Remove Hardware (2) and remove filter.
4) Install parts in reverse order.

Always depressurize the entire system, disconnect all power sources and lockout/tagout all components before any maintenance or troubleshooting is attempted. Failure to comply with the above warning could cause electrical shock and inadvertent activation of equipment resulting in death or serious injury.

For proper operation, maintenance should be performed with the assistance of a qualified technician. Failure to comply with the above warning could result in death or serious injury.

Release of high speed abrasive and compressed air occurs during depressurization of the abrasive blasting pot. Ensure appropriate Personal Protective Equipment is in use. Failure to comply with the above caution may result in minor or moderate injury.
TROUBLESHOOTING

If the Blastmaster® Mobile Blasting Systems do not function properly, check the following:

### Blast Pot

<table>
<thead>
<tr>
<th>SYMPTOM (Cause)</th>
<th>ACTION</th>
</tr>
</thead>
<tbody>
<tr>
<td>Abrasive Blasting Pot will not pressurize</td>
<td>Refer to remote control system Operator’s Manual. Insufficient air supply. Ensure a minimum of 50 psi is supplied to Blast Pot and sufficient air volume to support blast nozzle. Ensure internal piping is aligned with fill hole. Ensure pop-up valve and pop-up valve seat are seating without air leaks. Replace damaged components.</td>
</tr>
<tr>
<td>Blast Pot will not depressurize or depressurizes slowly</td>
<td>Refer to remote control system Operator’s Manual. Inspect Blast Pot Exhaust Muffler for debris. Clean or replace Element.</td>
</tr>
<tr>
<td>No Air or Abrasive exits the Blast Nozzle</td>
<td>Depressurize Blast Pot. Inspect blast nozzle and abrasive blasting hose for blockage. Remove blockage or remove components from use. Pressurize Blast Pot using the remote control system and open and close choke valve rapidly. If problem persists refer to abrasive metering valve Operator’s Manual.</td>
</tr>
<tr>
<td>Intermittent abrasive flow</td>
<td>Damp or wet abrasive. Remove abrasive from Blast Pot by cleaning out the vessel. Ensure dry abrasive is used. Install a moisture separator at the inlet of the Blast Pot. Increase the inner diameter of air supply hose. Blast nozzle is worn or too large for compressor size. Replace blast nozzle.</td>
</tr>
</tbody>
</table>

---

### WARNING

Always depressurize the entire system, disconnect all power sources and lockout/tagout all components before any maintenance or troubleshooting is attempted. Failure to comply with the above warning could cause electrical shock and inadvertent activation of equipment resulting in death or serious injury.

For equipment manufactured by entities other than Marco, you must consult the Original Equipment Manufacturer operator’s manuals, information, training, instructions and warnings, for the proper and intended use of all equipment. Failure to comply with the above warning could result in death or serious injury.

Moving parts can present an area where crushing, pinching, entanglement or amputation may occur. Do not place body parts or foreign objects in any area where there are moving parts. Failure to comply with the above warning could result in death or serious injury.

---

W-563

Always depressurize the entire system, disconnect all power sources and lockout/tagout all components before any maintenance or troubleshooting is attempted. Failure to comply with the above warning could cause electrical shock and inadvertent activation of equipment resulting in death or serious injury.

W-511

For equipment manufactured by entities other than Marco, you must consult the Original Equipment Manufacturer operator’s manuals, information, training, instructions and warnings, for the proper and intended use of all equipment. Failure to comply with the above warning could result in death or serious injury.

W-562

For equipment manufactured by entities other than Marco, you must consult the Original Equipment Manufacturer operator’s manuals, information, training, instructions and warnings, for the proper and intended use of all equipment. Failure to comply with the above warning could result in death or serious injury.

### Troubleshooting

**Aftercooler**

<table>
<thead>
<tr>
<th>SYMPTOM (Cause)</th>
<th>ACTION</th>
</tr>
</thead>
</table>
| **Fan Blades not turning** (Improper air supply, Failed fuse, Improper electric supply, Improper connection, Obstruction, Damaged components, Lack of lubricant, Muffler obstructed or fouled) | Check air supply to air motor - confirm supply air is on and set to 60 psi.  
Check the fuse if electric, and replace as needed.  
Check the power supply if electric, and confirm power supply is compatible with electric motor.  
Check the connections to power supply if electric, and confirm solid contact.  
Clear any obstructions from fan blades.  
Inspect fan blades for damage. Replace damaged components.  
Test fan blades for free movement. If air motor does not move, repair or replace air motor.  
Clear any obstructions from exhaust muffler. Replace muffler if fouled. |
| **Fan Blades turning slowly** (Improper air supply, Improper electric supply, Improper connection, Obstruction, Damaged components, Lack of lubricant, Muffler obstructed or fouled) | Check air supply to air motor - confirm supply air is on and set to 60 psi.  
Check the connections to power supply and confirm solid contact.  
Clear any obstructions from fan blades.  
Inspect fan blades for damage. Replace damaged components.  
Test fan blades for free movement. If air motor moves, but not freely, confirm lubricator is working properly (see Operating Instructions), introduce lubricant directly into air motor intake, rotate fan blades 3 to 4 complete rotations, then test again. If blades do not move freely, repair or replace air motor.  
Clear any obstructions from exhaust muffler. Replace muffler if fouled. |
| **Inlet Filter not draining collected moisture** (Damaged components, Obstruction) | Inspect drain valve for damage. Replace damaged components.  
Inspect drain valve for visible obstruction. Clear obstruction.  
If no damage or visible obstructions are found, disassemble drain pipe string, inspecting for internal obstructions. With pipe string removed from tank, examine attachment point for debris or obstructions. |

**LIMITED WARRANTY**

Sellers warrants to the original purchaser that the Product covered by this Limited Warranty will remain free from defects in workmanship or material under normal commercial use and service for a period of one year from the date of shipment to the original Purchaser. This Warranty shall not apply to defects arising, in whole or in part, from any accident, negligence, alteration, misuse or abuse of the Product, operation of the Product which is not in accordance with applicable instructions or manuals or under conditions more severe than, or otherwise exceeding, those set forth in the written specifications for the Product, nor shall this Warranty extend to repairs or alterations of the Product and/or any maintenance part by persons other than Seller or Seller’s authorized representatives. This warranty does not apply to accessory items. Further, this Warranty does not apply to damage or wear to the surface finish or appearance of the Product or normal wear and tear to the Product. This Warranty is limited to a purchaser who purchases the Product either directly from the Seller or from one of Seller’s “Authorized Distributors”. An Authorized Distributor is a Seller approved distributor that purchases the Product directly from the Seller for the sole purpose of re-selling the Product at retail, without any use or modifications whatsoever, to an end-purchaser. This warranty is specifically non-assignable and non-transferable.

**DISCLAIMER OF WARRANTY**

The foregoing Limited Warranty is exclusive and is in lieu of all other warranties, whether oral or written and whether express, implied, or statutory. SELLER HEREBY DISCLAIMS ALL OTHER WARRANTIES, INCLUDING BUT NOT LIMITED TO THE WARRANTIES OF MERCHANTABILITY AND/OR FITNESS FOR A PARTICULAR PURPOSE AND ALL SUCH OTHER WARRANTIES ARE HEREBY EXCLUDED AND ARE INAPPLICABLE TO THE PRODUCT. Seller makes no warranties or representations of any kind concerning respirators, or equipment made by other manufacturers. Seller’s agents and representatives are not authorized to offer any further warranties.

**EXCLUSIVE REMEDY FOR WARRANTY CLAIMS**

The sole and exclusive remedy under the foregoing limited warranty, and to the extent permitted by law, any warranty or condition implied by law, covering this product shall be, at the Seller’s option, the repair or replacement, free of charge, F.O.B. point of manufacture, of any defective part or parts of the Product that were manufactured by Seller, and which are returned to Seller at Seller’s principal place of business, postage prepaid by the Purchaser. This sole and exclusive remedy is conditioned upon Purchaser’s prompt written notice to Seller at Seller’s place of business that a defect has been discovered, together with a reasonably detailed description of the defect in the Product, proof of purchase of the Product, and the model and identification number of the Product within thirty (30) days after discovery of the defect, otherwise such claims shall be deemed waived. No allowance will be granted for any repairs or alterations made by Purchaser or others without Seller’s prior written consent. If such notice is timely given, Seller will have the option to either modify the Product or component part thereof to correct the defect, replace the Product or part with complying products or parts, or refund the amount paid for the defective Product, any one of which will constitute the sole liability of Seller and full settlement of all claims. In no event shall Seller be liable for any obligation greater than the original purchase price of the Product under this warranty. Purchaser shall afford Seller prompt and reasonable opportunity to inspect the Product for which a claim is made. The sole purpose of the foregoing stipulated exclusive remedy shall be to repair or replace defective Products or components thereof, or to refund Purchaser the purchase price thereof. This stipulated exclusive remedy shall not be deemed to have failed of its essential purpose so long as Seller is willing and able to repair or replace the defective parts or refund the purchase price in accordance with the terms hereof. Products that have been repaired or replaced under this warranty do not receive a new warranty and are only covered by the remaining portion of the original warranty.

**LIMITATION OF REMEDIES**

The foregoing stipulated exclusive remedy is in lieu of all other remedies for breach of contract, warranty, and/or tort or otherwise. Seller shall not be liable, either directly or indirectly, for any consequential, incidental or special losses or damages of Purchaser, including but not limited to the Purchaser’s expenses for downtime or for making up downtime, damages for which the Purchaser may be liable to other persons and/or entities, damages to property, and injury to or death of any persons and/or any claims for incidental or consequential damages, including but not limited to loss of profits, regardless of whether Seller has been informed of the possibility of such damages. Seller neither assumes, nor authorizes any person to assume for it, any other liability in connection with the sale or use of any Products covered by the foregoing Warranty and Disclaimers, and there are no oral agreements relating to remedies which are collateral to or which affect this limitation.
